12/19/2017

Name: Menominee River Garden Beds **Site Number:** 20ME61
Other Names:
Country: Menominee **Region:** Western Upper Peninsula
Township: Holmes, Lake **River Basin:** Menominee

Map: Resort Lake Quadrangle, 7.5' USGS

<u>Township</u>	<u>Range</u>	<u>Section</u>	<u>Quarter</u>
36N	28W	31	
35N	28W	06	NW
35N	29W	01	
35N	29W	12	NW

Coordinates:

Universal Transverse Mercator Zone 16 437264E 5036291N (NAD27)
 Universal Transverse Mercator Zone 16 434110E 5032736N (NAD27)

Narrative Description:

Intact garden beds extend intermittently but almost continuously along a two-mile stretch of the Menominee River. The beds are found from the river bank to about 700 feet east of the road. Many different patterns are evident, with the more elaborate and more carefully executed closest to the river. The beds are subtle, and can be best discerned in spring or late fall, when the forest floor vegetation is gone. Marla Buckmaster mapped many of the beds in 1998, and will continue the work in 1999. [Buckmaster, 10/21/98 and 11/9/98, personal communication to B. Mead]. Several large burial mounds lie surrounded by garden beds. The Backlund village and Backlund mounds also lie within the garden bed vicinity. In 1997, NMU investigated the historic camboose feature located on the site, recovering faunal remains, metal, glass, kaolin pipe fragments, a lead nugget, and nails.

In 1999, Buckmaster, assisted by a crew from Grand Valley State University led by Janet Brashear, took phytolith and flotation samples and did some limited testing. Mead of the Office of the State Archaeologist visited the crew and took some photos. There are two terraces between River Road and the Menominee River. Garden beds are present on both terraces, as well as across the road. The 1999 testing took place in the Sixty Islands area, northwest of the road, in the vicinity of a large burial mound. In 2010, Kathryn Parker examined floral samples. She found only wood charcoal, representing a variety of hardwood and conifer species: black ash, maple, poplar, oak, pine, white cedar, hemlock.

CCRG undertook a GPR survey of a small portion of the site in 2010. Three transects were investigated. Two of the features investigated were unknown surface features, and the third transect covered some of the garden bed furrows. They determined that while distinctive stratigraphy of the garden beds was not possible with GPR, there was a noticeable difference between the results from the garden beds versus those from outside the beds. CCRG to state that the GPR survey confirmed the cultural construction of the beds. They determined the other two surface features to be of natural origins. A small survey on private land did not locate any evidence for the site in 2015.

Coordinates:

Universal Transverse Mercator

Zone 16 38190E 5039440N (NAD27)

Narrative Description:

The site was originally reported (1998) as a foundation of field stone and mortar for a basement or root cellar, probably late nineteenth to early twentieth century. A second foundation and additional scatter was discovered in 2001 in the center of a narrow isthmus in Rosebush Lake in the Menominee River, and site boundaries were expanded west to include these features. The new foundation is a 2x3 x 1 meter deep mortared fieldstone foundation with a small depression in its center. Artifacts include brick, plate glass, medicine bottle, belt buckle, bucket and animal bone.

Map: Miskauno Island Quadrangle, 7.5' USGS

<u>Township</u>	<u>Range</u>	<u>Section</u>	<u>Quarter</u>
36N	28W	17	NW-SW-SW and SW-SW-SW

Coordinates:
Universal Transverse Mercator Zone 16 437600E 5039690N (NAD27)

Narrative Description:

Two positive shovel tests yielded one artifact each. Surface collecting produced 23 more items. A dark stain with charcoal flecks and possible fire-cracked rock on a dirt road may be a hearth. A shovel test placed 50 cm from this stain produced one flake. The assemblage consists of chert, quartzite, quartz and rhyolite debitage, with possible fire-cracked rock.

Information Sources: Field verified
Field Evidence: Surface scatter | Positive shovel-test(s)

<u>Period</u>	<u>Date</u>	<u>Culture</u>	<u>Function</u>
prehistoric period		Native American	undetermined

Coordinates:

Narrative Description:

A series of raised surface features was identified, two of which show evidence of having been excavated. The site was subsequently investigated using GPR, which suggested that the site was cultural in origin and that the mounds represent likely funerary features. Given the presence of similar features nearby with known burials, there is a strong probability of human remains at this site.

<u>Township</u>	<u>Range</u>	<u>Section</u>	<u>Quarter</u>
35N	29W	12	SE-NW-NW-NE

Coordinates:

Narrative Description:

This is the site of a potential prehistoric garden bed. Approximately 30 meters by 10 meters, two possible garden beds were found on an upland terrace. No artifacts were visible. Trenches were excavated at the site in 2010, in an effort to further understand the site. No artifacts were located in the trenches or in shovel test pits. The trenches revealed a constant stratigraphy across the linear features, very different from the stratigraphy at 20ME61) leading CCRG to conclude that these were natural phenomenon and not garden beds.

Information Sources: Recon. level survey (meets fed. s&g)
Field Evidence: Feature(s)

<u>Period</u>	<u>Date</u>	<u>Culture</u>	<u>Function</u>
prehistoric period		Native American	garden bed

<u>Township</u>	<u>Range</u>	<u>Section</u>	<u>Quarter</u>
35N	28W	07	NE-SW-NE

Coordinates:

Narrative Description:

Two structural foundation features were located that are most likely the remains of an early twentieth century logging camp. The first feature consists of a two roomed structure with a raised outer earthen berm and adjoining borrow pit. There are two openings, located directly opposite of each other and forming an entryway (or dingle). This feature has been impacted by a modern logging road on the northwest corner. Feature 2 is an auxiliary structure immediately northwest of Feature 1. It is located on the opposite of the modern logging road, and is constructed in similar fashion to Feature 1, though it is smaller. CCRG believes the southern part of F1 may have served as a cookhouse, and the northern part as a bunkhouse, based on artifacts found within the ditch on the west side (cast iron stove, medicine bottle, cast iron frying pan, tea kettle, and brick fragments). A scatter of 1950s/1960s era artifacts were also found within the ditch. The camp is located on an aerial photograph taken in 1939. Limited shovel testing throughout the site did not locate any additional artifacts.

Information Sources: Recon. level survey (meets fed. s&g)

Field Evidence: Feature(s) | Surface scatter

<u>Period</u>	<u>Date</u>	<u>Culture</u>	<u>Function</u>
Twentieth Century		American	lumbering camp

Coordinates:

Narrative Description:

Three features were located in a level grassy area. The first feature is a circle of rocks surrounding a pit, which is approximately 25 cm deep. Rocks also run an additional 3 meters tangential to the south edge of the feature. Feature 2 is west of Feature 1, and consists of a 12 meter long line of rocks, broken into three segments. Feature 3 is a 3 meter line of rocks, east of Feature 1. Several other small rock piles were also noted around the site. The only artifact was a 55 gallon drum that had sunk two-thirds into the ground. Shovel testing did not reveal any artifacts, and the function of the site remains unknown.
